Future dates of Mars within 30 degrees of the lunar node — a plan to call fire down from heaven through the year 2035

Below are the dates of when Mars will be within 30 degrees of the lunar node between 2026 and 2035

Feb 4th 2026 — April 19 2026 (predict that the highest concentration of rocket fire against Israel during the year 2026 will occur between these dates)

September 27 2026 — June 12, 2027(predict that the highest concentration of rocket fire against Israel during the year 2027 will occur during the last 3 to 3.5 months of this period **March 1 — June 12)**

Note: If Mars retrograde happens during carry over, use the last 3 to 3.5 months of that period to predict the highest concentration of rocket fire for the year. -see 2010 & 2014 stats https://www.academia.edu/124394993

If Mars is not retrograde during carry over, then do not use those dates to make prediction

December 2 2027 — February 12 2028 (carry over, so do not apply to prediction)

July 11, 2028 — Oct 5th 2028 (predict that the highest concentration of rocket fire against Israel during the year 2028 will occur between these dates)

September 23, 2029 — December 9th 2029(predict that the highest concentration of rocket fire against Israel during the year 2029 will occur between these dates)

May 3rd 2030 — July 24, 2030(predict that the highest concentration of rocket fire against Israel during the year 2030 will occur between these dates)

January 24th 2031 — September 28th 2031 (predict that the highest concentration of rocket fire against Israel during the year 2031 will occur between **June 14th and September 28th**)

note: If Mars retrograde extends the period of Mars being within 30 degrees of the lunar node within the calendar year, use the either the first or last 3 to 3.5 months of the alignment—depending on when Mars first crosses the lunar node—to predict when the highest concentration of rocket attacks will occur — see 2018 stats https://www.academia.edu/124394993

Feb 24 2032 — May 13, 2032 (predict that the highest concentration of rocket fire against Israel during the year 2032 will occur between these dates)

October 30 2032 — January 30, 2033(carry over, so do not apply to prediction)

December 12 2033 — March 2, 3034(carry over, so do not apply to prediction)

-note Don’t make any predictions of rocket attacks in 2033

August 17, 2034 — November 12, 2034 (predict that the highest concentration of rocket fire against Israel during the year 2034 will occur between these dates)

May 1, 2035 — December 2, 2035 (predict that the highest concentration of rocket fire against Israel during the year 2034 will occur between **May 1 and August 15th**)

Here is the final layout for making verbal predictions of rocket fire escalation against Israel from 2026– 2035. For each year, expect the highest concentration of rocket attacks against Israel between these times.

Feb 4th 2026 — April 19 2026

Mar 1, 2027— June 12, 2027

July 11, 2028 — Oct 5th 2028

Sept 23, 2029 — Dec 9th 2029

May 3rd 2030 — July 24, 2030

Jun 14th 2031 — Sept 28 2031

Feb 24 2032 — May 13, 2032

Aug 17, 2034 — Nov 12, 2034

May 1, 2035 — Aug 15, 2035

The parameters applied here also apply to the years of rocket attacks going back to 2005. This is for consistency of methodology https://www.academia.edu/124394993
